Electronic and Magnetic Properties at High Pressure

Dr. Andrew Cornelius
Department of Physics & Astronomy
Phone (702) 895-1727

Expertise:

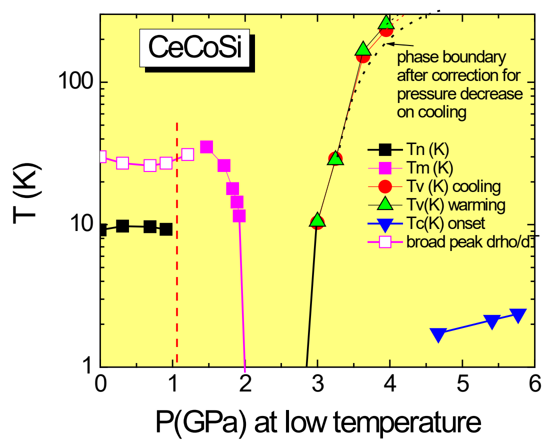
- Experimental high pressure measurements
- Magnetism
- Superconductivity

UNLV | COLLEGE OF SCIENCES

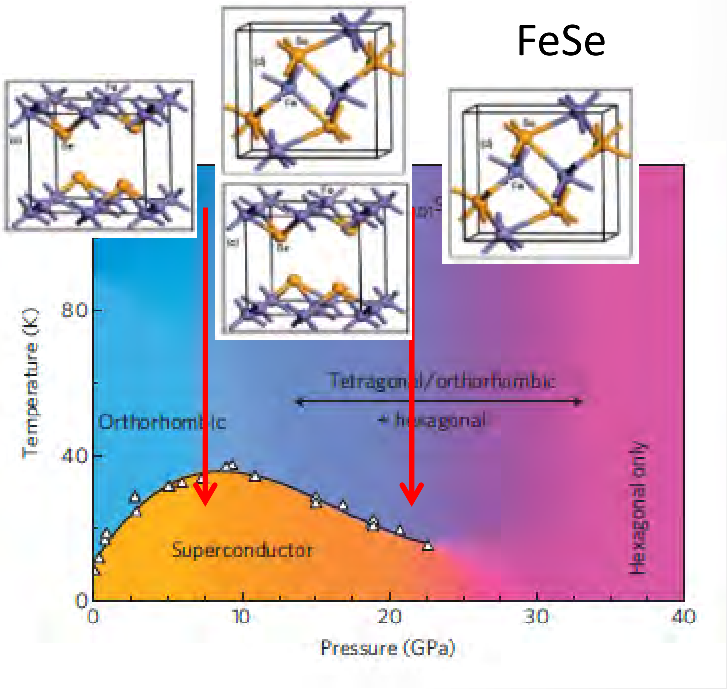
Superconductivity

Quantum Design PPMS at UNLV

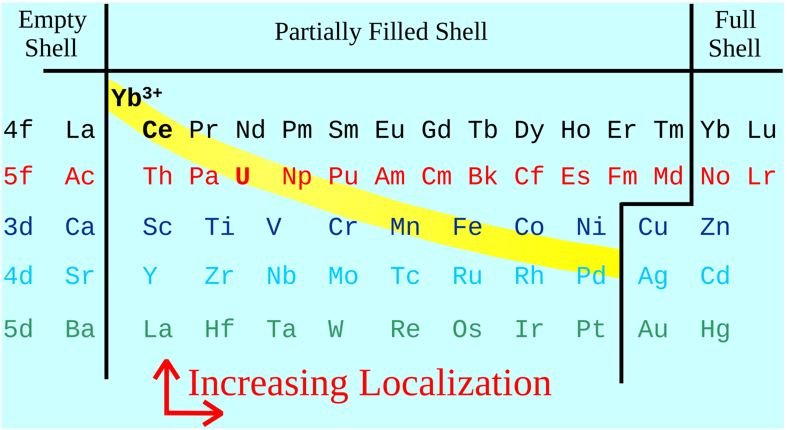
- Measurements from 0.3 K to 400 K
    - Heat capacity, electric and thermal transport, and AC/DC magnetization
- Pressure cells to measure electrical properties (clamp to 3 GPa and diamond anvil cell to >100 GPa)



Addition of high pressure synchrotron experiments (diffraction and X-ray absorption) allows mapping of complex superconducting phase diagrams

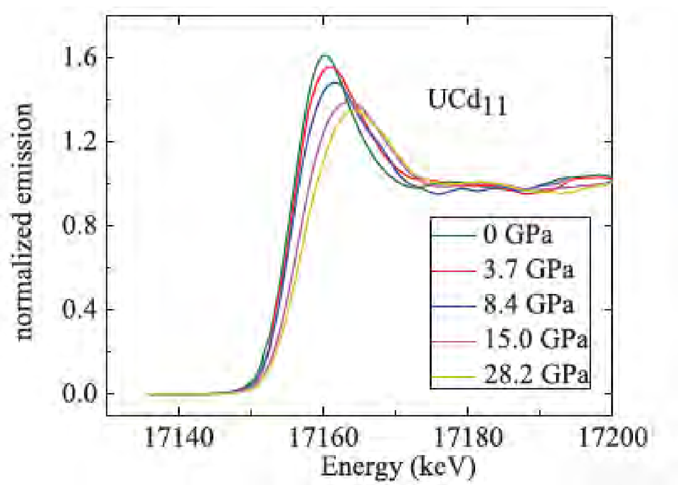


Correlated-Electron Systems

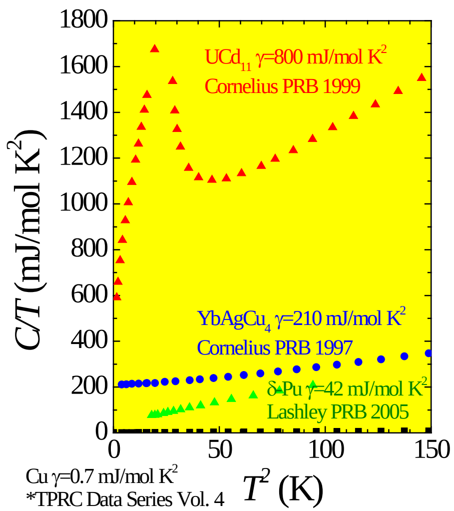


Modified periodic table

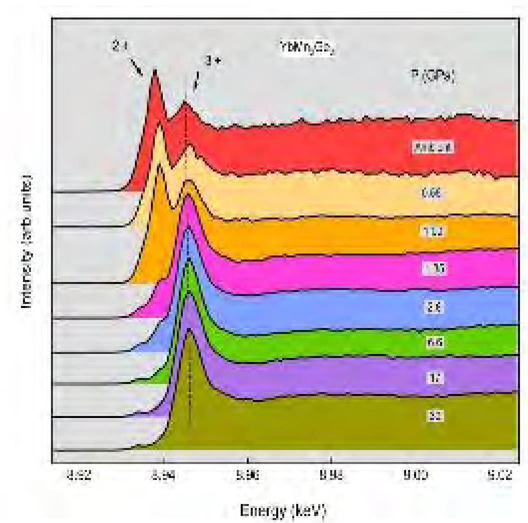
- Going from localized to delocalized electrons one often finds strong electron-electron correlations
- Correlated electron systems can yield interesting behavior: fluctuating valence, superconductivity, non-Fermi liquid, heavy fermion and many more



f-electron delocalization
X-ray absorption



Heavy fermions
Heat Capacity



Fluctuating valence
X-ray fluorescence

Island – Quantum computing, quantum sensing

The Nanoscale Physics Group @ UNLV

Areas of Research

- Nanotechnology, device physics
- Photodetection and quantum sensing
- Quantum computing, topological qubits
- Non-equilibrium, driven systems
- Superconductivity, proximity effects
- Low dimensional materials

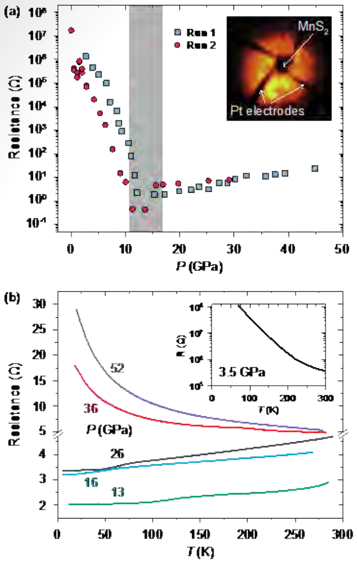
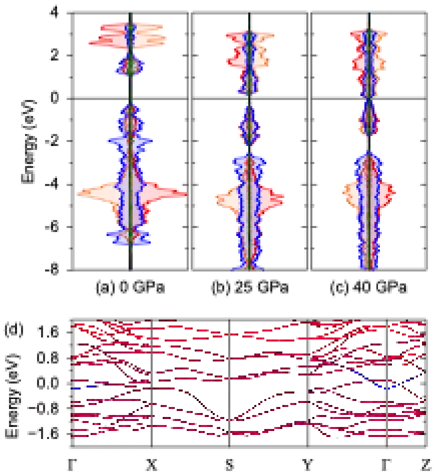
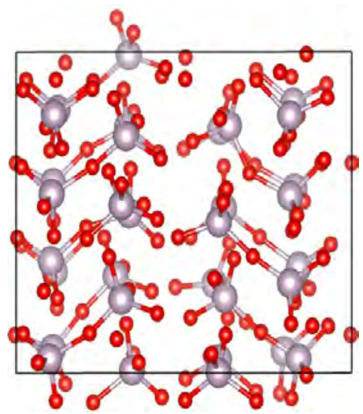
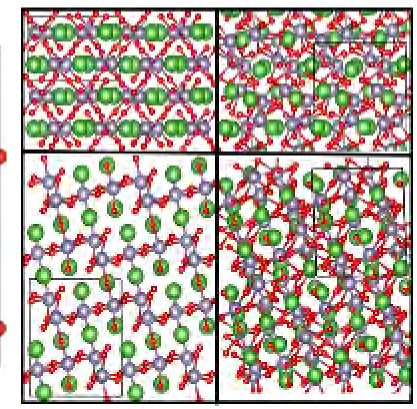
Island's Lab website



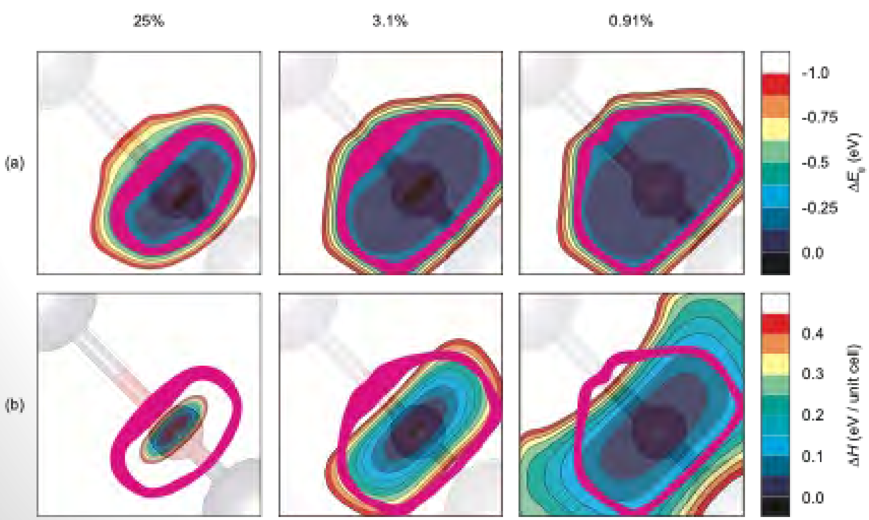


We primarily perform electronic structure simulations to understand pressure driven phenomenon particularly related to correlated electron systems and changes in bonding.





This includes molecular dynamics to understand the thermal behavior of materials and melts,



as well as crystal structure prediction and the electronic response to pressure driven perturbations in crystalline lattices.

Our group is also focused on understanding and predicting high temperature superconductivity in pressurized systems. As part of the team that reported room temperature superconductivity in a carbonaceous sulfur hydride system, we have been focused on understanding the molecular pathway to that system, the fundamental interactions driving its superconductivity, and building machine learning tools to predict such properties in new materials.

Condensed Matter Theory

Tao Pang

Department of Physics and Astronomy

University of Nevada, Las Vegas

UNLV | COLLEGE OF SCIENCES

Research Methods and Systems Studied

- Analytical Approach

  Quantum Hall effect; quantum transport phenomena, superconductor-insulator transitions; vibrational modes in glasses; and slow light in cold atoms.

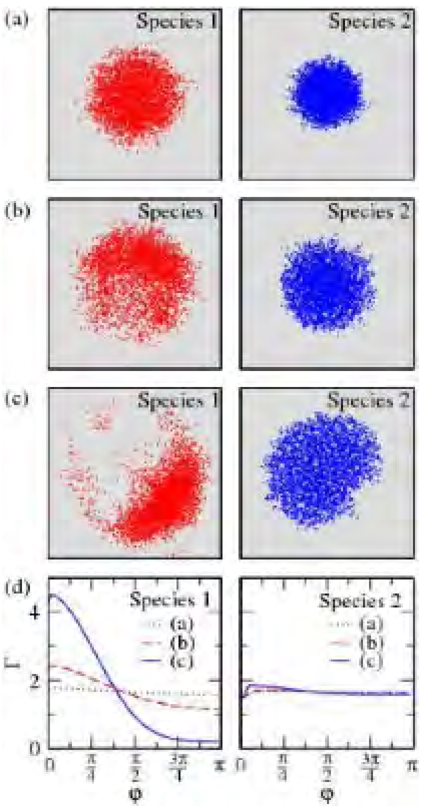
- Diffusion Quantum Monte Carlo Simulation

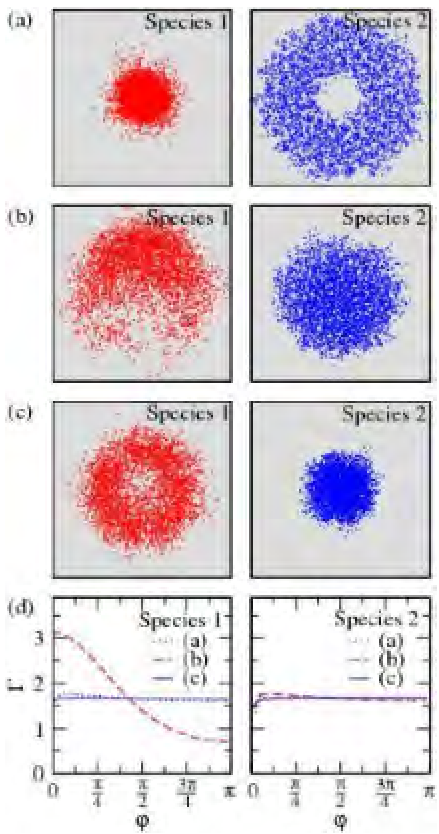
  Negative donor centers in semiconductors; hydrogen molecules in confinement; ionic hydrogen clusters; and helium clusters with modified interactions.

- Path Integral Quantum Monte Carlo Simulation

  Bosons trapped in potential wells in one dimension or two dimensions; Bose-Einstein condensation of cold atoms; and asymmetric distributions of Bose-Einstein condensates of boson mixtures.

An Example: Asymmetry of the Mixed Bose Condensates:





Asymmetric distributions of two Bose-Einstein condensates in the same trap with different cluster parameters.

H. Ma and T. Pang, Phys. Rev. A **70**, 063606 (2004).

Novel chemistry and biology using highly ionizing radiation

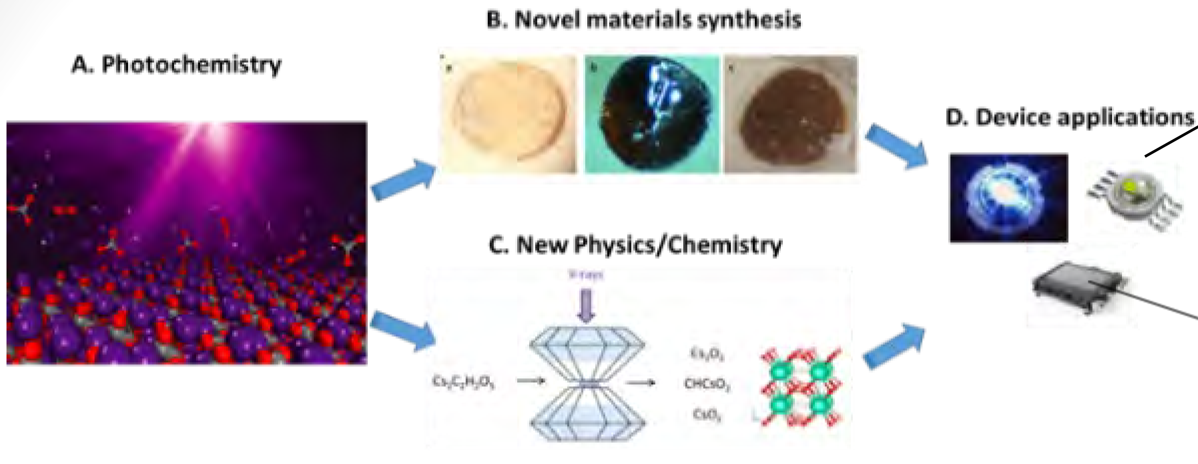
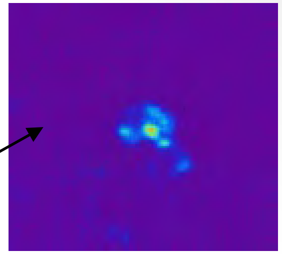
Expertise:
Useful Hard X-ray photochemistry
High pressure
Spectroscopy
Ion Beam Nuclear Transmutation Doping
High quality synthesis of vaccines using tuned hard x-rays

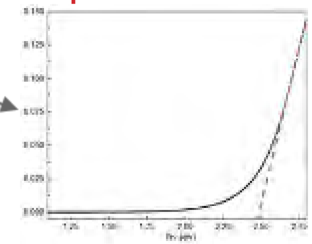
UNLV | COLLEGE OF SCIENCES

Pravica Group Research





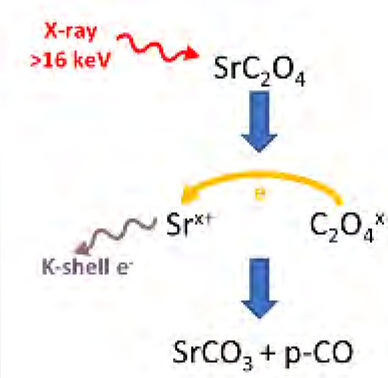
Optical mixer

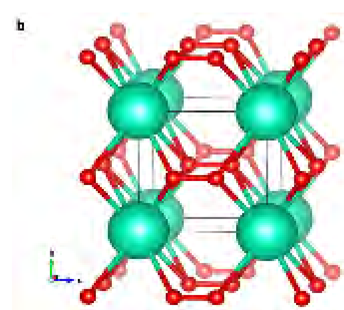


Wide bandgap semiconductor

Radiation-hardened sensors/direct energy conversion devices for EXTREME CONDITIONS or tuned solar materials

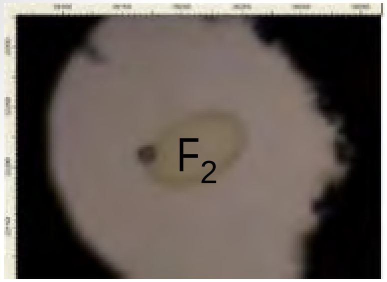
Useful hard x-ray photochemistry

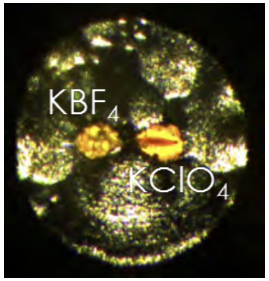




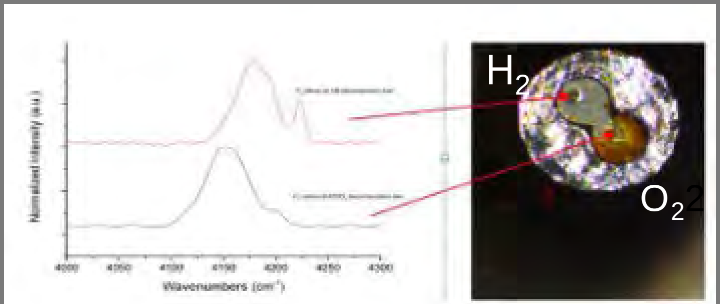
Novel structures of known materials produced
With hard x-rays and high pressure (e.g. CsO_2)

High Pressure Fluorine Chemistry



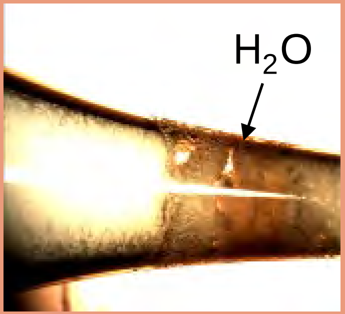


$$2F_2 + O_2 \xrightarrow{h\nu} 2OF_2 \ @ \ 3\ \text{GPa}$$



5 GPa

Molecular mixtures at high pressure

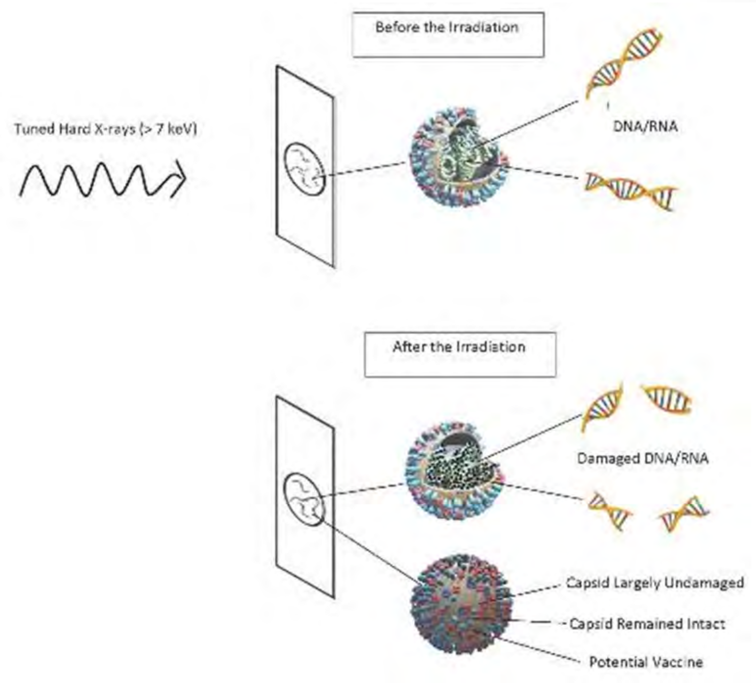


X-ray induced combustion

Inner shell chemistry at high pressure

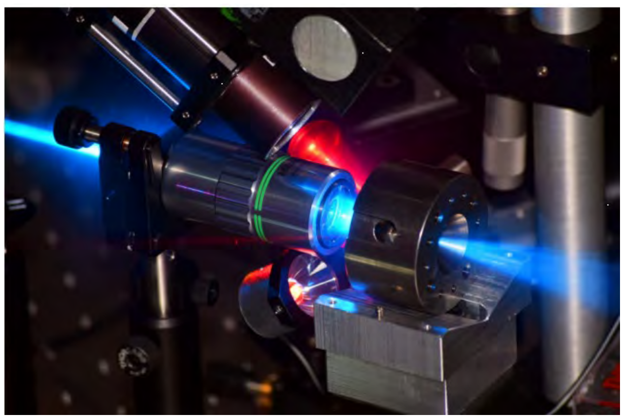
$XeF_2 \xrightarrow{h\nu} Xe + F_2$ (*in situ* x-ray fluorination)

$HgF_2 + F_2 \xrightarrow{h\nu} HgF_4$

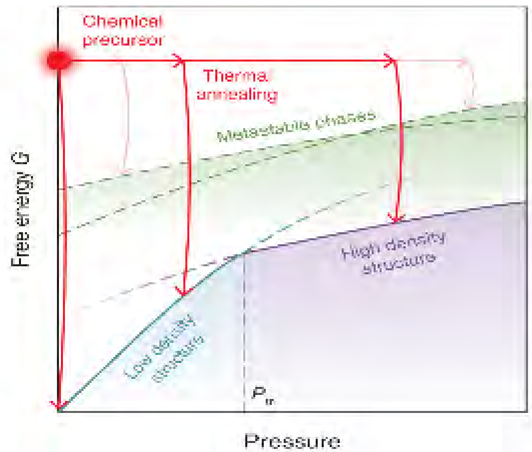


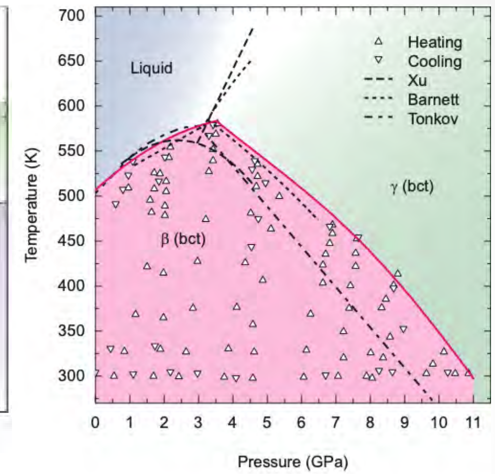
Using tuned hard x-rays to damage viruses to create high quality vaccines by targeting specific molecular groups/bonds that resonantly absorb x-ray energy leading to decomposition chemistry.

Salamat Group – Collaboration with MSTS

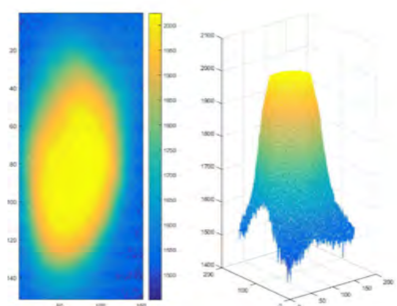


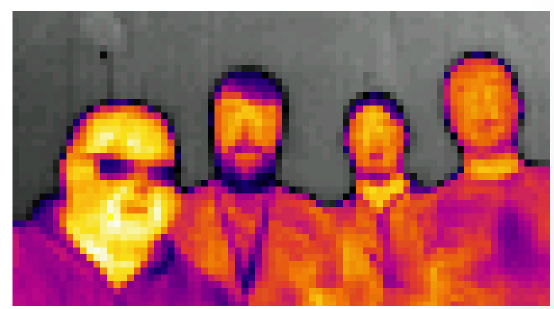
Metrology – accurate mapping of P, V, T



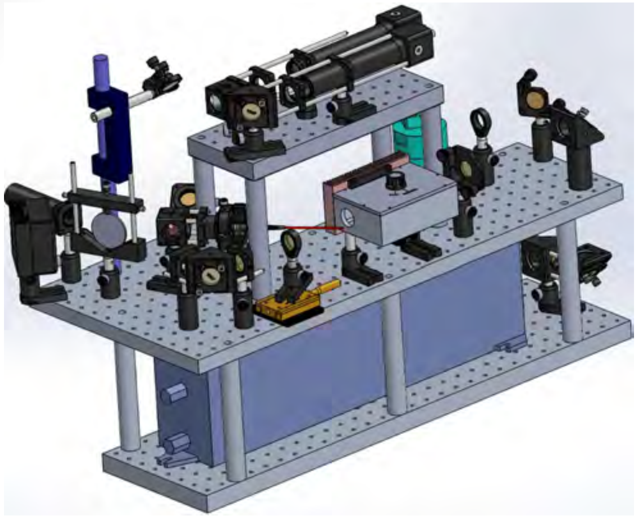


High temperature modelling – understanding emissivity under extreme conditions





Warm dense matter – probed using EXAFS



- Development of a CO_2 laser heating
- Direct heating of non-metallic systems in a DAC
- First HTHP EXAFS measurements of insulators

- In situ and post heating measurements
- Determining absolute temperature from
X-ray spectroscopy
