

Water Resources: Water, Land & Life Research

Critical Zone Hydrology

- **Dr. Hannes Bauser**
- Assistant Professor
- Department of Geoscience
- Email: hannes.bauser@unlv.edu
- Website: <https://geoscience.unlv.edu/people/departement-faculty/hannes-bauser/>

Expertise

- Vadose Zone Hydrology and Soil Physics
- Hydrologic Modeling
- Data Assimilation
- Machine Learning

Hydrologic Scaling Challenge

Collaboration with the Desert Research Institute for access to the [SEPHAS Lysimeters](#) in Boulder City.

Collaboration with the University of Arizona for access to the [Landscape Evolution Observatory](#) at Biosphere 2.

How can we use data science (e.g., data assimilation, machine learning) to combine process understanding and data to solve the hydrologic scaling challenge?

Dr. Dale Devitt

Professor

Director - Center for Urban Water Conservation

School of Life Sciences

Phone 702-895-4699

Expertise

Soil Plant Water Relations

Water Management

Evapotranspiration

Salinity

Current Research

- Assessing the impact of large scale solar development on desert ecosystems.

- Tree grass water use tradeoffs in urban landscapes

10 acre research facility in North Las Vegas dedicated to conducting applied and basic water related research.

Response (growth, flower and seed production) of desert perennial shrubs to altered precipitation

Aqueous Geochemistry and Astrobiology

- **Dr. Elisabeth (Libby) Hausrath**
- Professor
- Department of Geoscience
- Email: Elisabeth.Hausrath@unlv.edu
- Website: <https://hausrath.faculty.unlv.edu/>

Expertise

- Using laboratory experiments, field work, and modeling to interpret water-rock interactions and soil-forming processes on Earth and Mars
- Interpreting the signatures of past aqueous and biological impacts on minerals
- Participating Scientist on the Mars Science Laboratory Curiosity and the Mars2020 rover Perseverance and member of the Network for Life Detection ([NFOLD](#)) Steering Committee..

Sedimentary Geology

Dr. Ganqing Jiang

Professor

Department of Geoscience

Phone: (702) 895-2708

Email: Ganqing.Jiang@unlv.edu

Expertise:

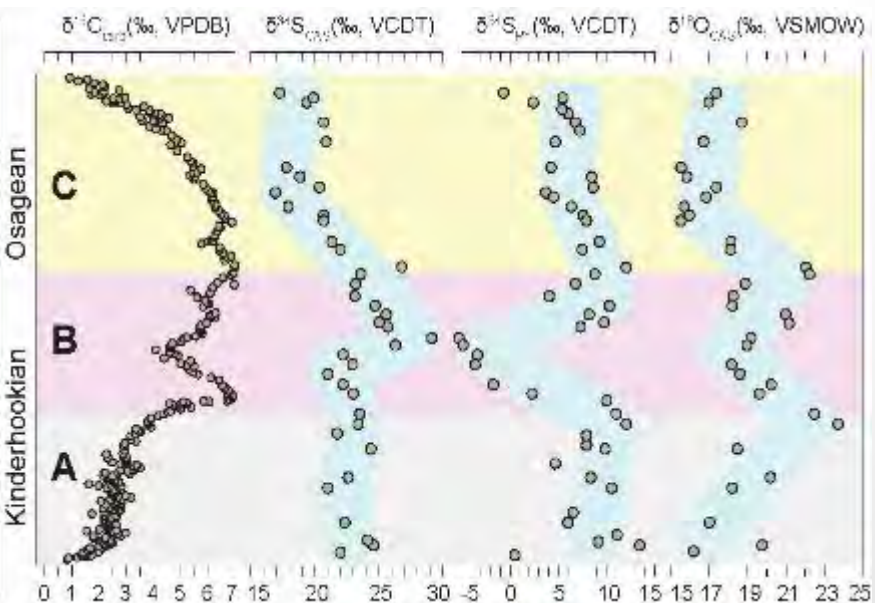

Sequence and chemostratigraphy

sedimentology

Carbonate diagenesis

- Sequence and chemostratigraphy
- Paleogeographic reconstruction
- Applications of stable isotopes and rare earth elements
- Paleoenvironmental change across major perturbations of the carbon cycle and mass extinctions

- Basin analyses and paleoceanography
- Fluid migration and carbonate diagenesis
- Tracing fluid migration in sedimentary basins using stable isotopes and trace elements
- Carbonate aquifer

Hydrology

- **Dr. David K. Kreamer**
- **Professor**
- **Department of Geoscience**
- **Email: dave.kreamer@unlv.edu**
- **Website: <https://geoscience.unlv.edu/people/departement-faculty/david-k-kreamer/>**

Expertise

- **Hydrologist, Water Quantity and Quality**
- **Research in Groundwater Tracing and Dating in National Parks and Preserves, Surface Water/ Groundwater interactions, Spring Sustainability**
- **Research in Hazardous Site Characterization and Remediation**
- **International Water Development and Security**
- **Climate Change Research – Lake Studies**
- **Expert Witness in Court Cases, Testimony to United States Congress, Invited Address to the General Assembly of the United Nations**
- **President – International Association of Hydrogeologists, largest truly international professional organization focused on the wise use and protection of groundwater. A scientific, educational, and charitable volunteer organization with thousands of members in over 130 countries, founded in 1956.**
- **National and International Lectures and Short Courses including presentations in the Middle East, Africa, Pacific Ocean, People’s Republic of China, Europe, and United States**

David K. Kreamer – Examples of Research and Service Interests

Contaminant Transport Studies

Students sampling springs as part of sustainability studies in the Mojave desert

Testimony to U.S. Congress, and presentations to National Academy of Sciences – International Hydrologic Programme of the United Nations, UNESCO, and the U.N General Assembly

Research on Springs in Grand Canyon National Park

Groundwater Modeling Training, Niger, Africa

Climate Science and Paleoclimatology

Matthew S. Lachniet

Professor

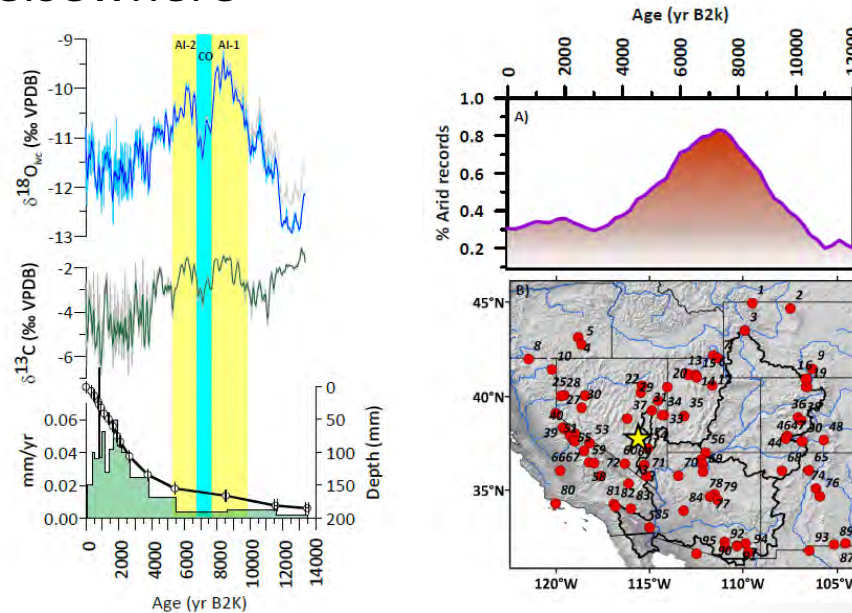

Department of Geoscience

Phone 702-895-4388

Matthew.Lachniet@unlv.edu

Paleoclimatology

- Study of the causes, timing, and consequences of climate change on timescales ranging from decades to millennia
- Cause of aridity in the Great Basin and Western United States
- Influence of ocean temperatures on precipitation in Nevada
- Cave archives of past climate with sites in Nevada, Mexico, Central America, and elsewhere

Hydrology

Dr. Michael Nicholl

Department of Geoscience

Phone: (702) 895-4616

Email: michael.nicholl@unlv.edu

Expertise:

Unsaturated zone hydrology

Fractured rock hydrology

Environmental fluid mechanics

Fractured Rock Hydrology

False color image of a miscible displacement experiment in a single fracture

Field mapping of fracture networks
blue dye (right foreground) is from an infiltration test

Water (blue) pooled above a fracture intersection

Isothermal flow across a single rock fracture (matrix-to-matrix flow)

- ❑ Two-phase flow and transport in fractured rock
- ❑ Laboratory experimentation, field mapping, numerical simulations
- ❑ Contaminant transport, geothermal energy, enhanced petroleum recovery

Unsaturated Porous Media

Millimeter-scale transport experiment

Hydraulic conductivity of a rock slab

Sampling Chloride as a proxy for root-driven horizontal flow

2D simulation of root-driven transport

- ❑ Challenging existing conceptual models for unsaturated and two-phase flow
- ❑ Design and execution of critical laboratory/field/numerical experiments

Environmental Geochemistry

Dr. Zach Perzan

- Assistant Professor
- Department of Geoscience
- Email: zach.perzan@unlv.edu
- Website: <https://zperzan.github.io/>

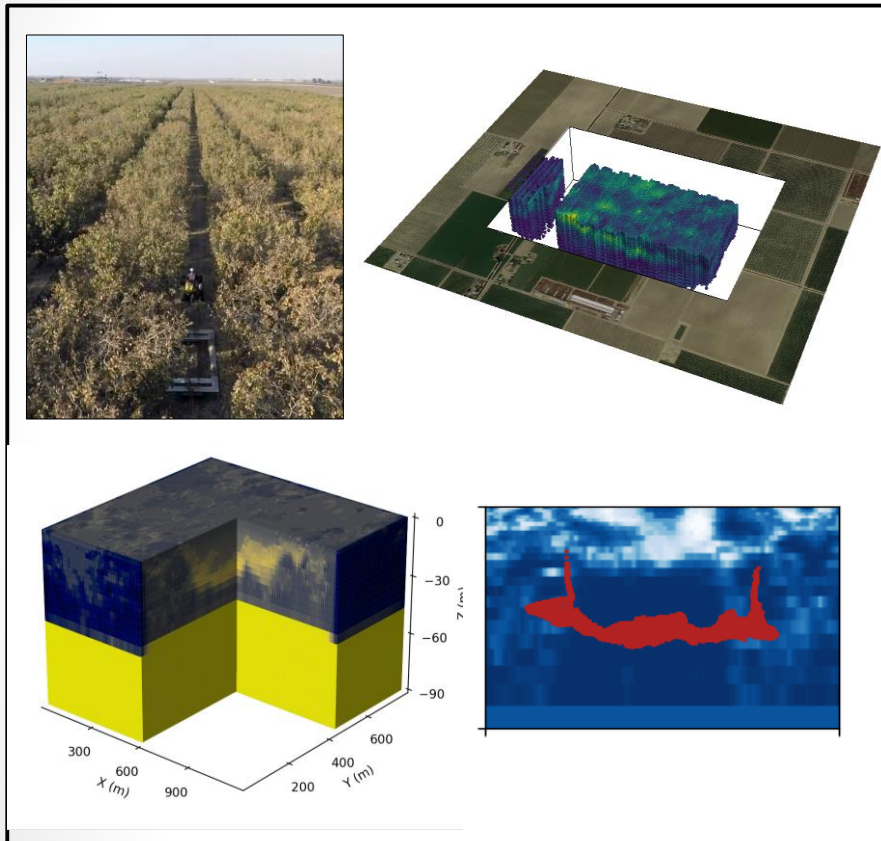

Expertise

- Environmental geochemistry
- Surface water-groundwater hydrology
- Machine learning
- Uncertainty quantification
- Managed aquifer recharge

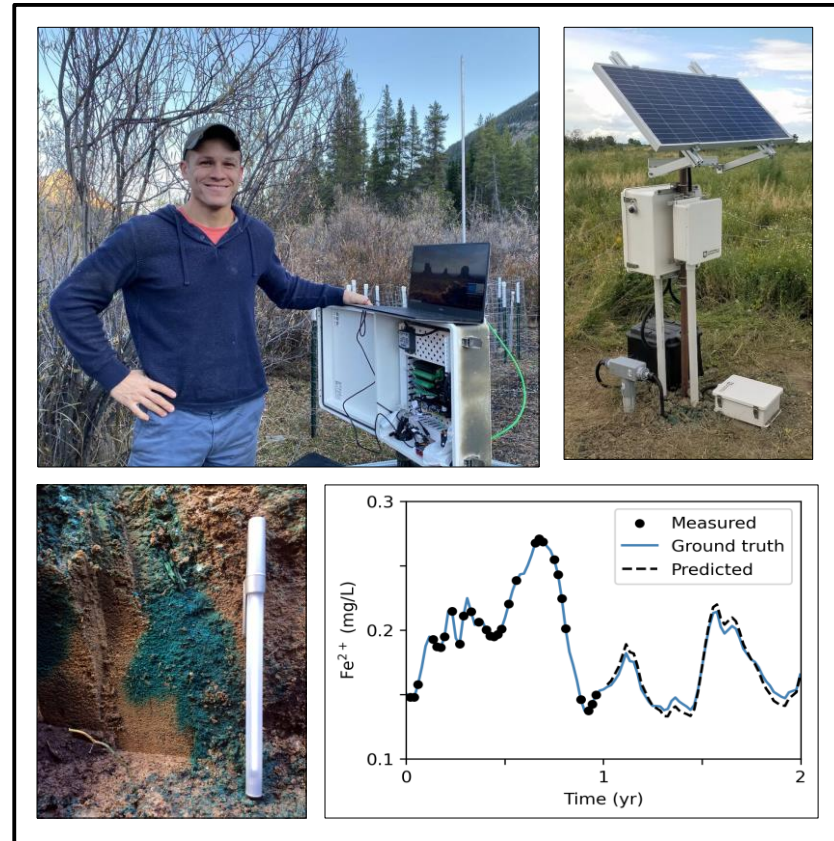

Understanding how hydrologic extremes (droughts and floods) impact water quality

Managed aquifer recharge

Geophysical surveys (top left) give us a 3D image of the distribution of sand, silt and clay within the subsurface (top right). We can then use hydrologic and geochemical models to understand how water (bottom left) and contaminants (bottom right) move through these sediments during a flood.

Floodplain biogeochemistry

Sensor arrays deployed in Colorado (top left) and Wyoming (top right) allow us to monitor sudden changes in water quality during floods. By pairing these with field experiments – such as tracer tests (bottom left) – we can develop data-driven water quality forecasts (bottom right).

Dryland ecology, hydrology and climate dynamics

Dr. Matthew Petrie

Assistant Professor

School of Life Sciences

ph: 702-895-5844

e: matthew.petrie@unlv.edu

Expertise:

Vegetation ecology and near-surface hydrology

Forest regeneration

Climate dynamics and climate change forecasting

Extreme events

Landscape ecology

Manipulative field experimentation

Linking extreme climate events and ecological dynamics across space and time

Above: Disentangling locally- and regionally-observed ecological responses to multiyear high and low rainfall periods. Multiyear periods are a key component of understanding climate impacts to arid and semiarid regions. Our research focuses on the physical mechanisms that shape ecological responses, providing a foundation for understanding the effects of local and regional extreme events in a changing climate.

Forecasting climate change impacts

Above: Natural forest regeneration may decline substantially throughout the western US in the 21st century. We study how climate, landscape properties, and the stress tolerance of tree populations will shape the future of western forests.

Left: Forecasts for increasing belowground extreme temperature events in a changing climate. We use downscaled climate model projections to forecast the increasing occurrence of moderate (0- σ) and very high (2- σ) extreme temperature events throughout multiple depths in the soil profile for ecosystems of the central and western US.

Dryland microbes and soil ecology

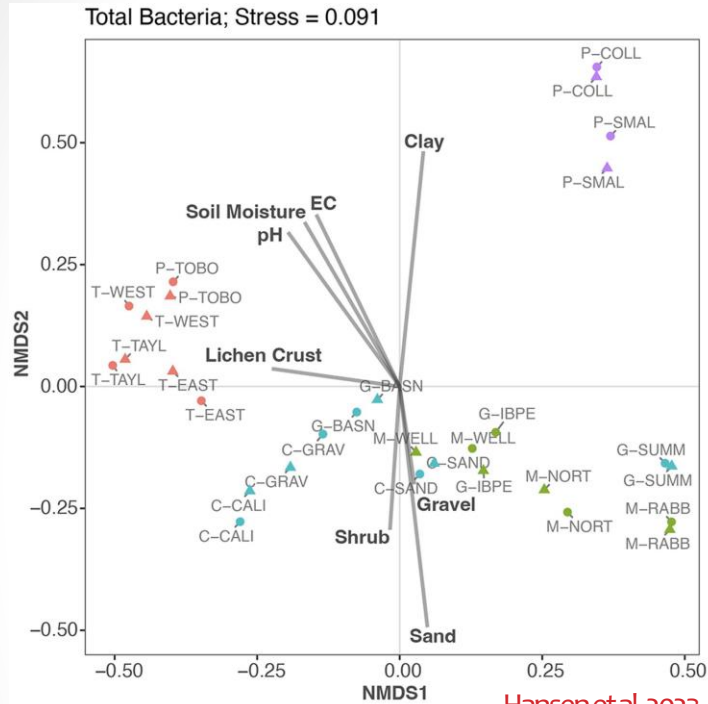

Dr. Nicole Pietrasiak

- Associate Professor of Sustainability in Arid Lands
- School of Life Sciences
- Email: nicole.pietrasiak@unlv.edu

Expertise

- Soil Microbiology and Ecology
- Biological Soil Crusts
- Phycology and Cyanobacteria/Algae Culture Collection
- Soil Science
- Dryland Ecology
- Biogeomorphology

In our lab we investigate what shapes the diversity, abundance, and distribution of desert microbes

Landscape and soil properties select for unique microbiomes

WHEN IS A LINEAGE A SPECIES? A CASE STUDY IN *MYXOCORYS* GEN. NOV. (SYNECHOCOCCALES: CYANOBACTERIA) WITH THE DESCRIPTION OF TWO NEW SPECIES FROM THE AMERICAS¹

We also describe species and genera new to science and society.

And we identify and quantify the roles microbes play in dryland ecosystem functioning and soil health

Microbes are part of our dryland biodiversity. They prevent soil loss, increase soil fertility, control nutrient cycling, and contribute to carbon sequestration.

Dryland microbes are crucial for maintaining sustainable arid lands.

Stovall et al. 2023

Computational biology and the physiology of plants

Dr. Paul J Schulte

Associate Professor,
School of Life Sciences
Email: paul.Schulte@unlv.edu

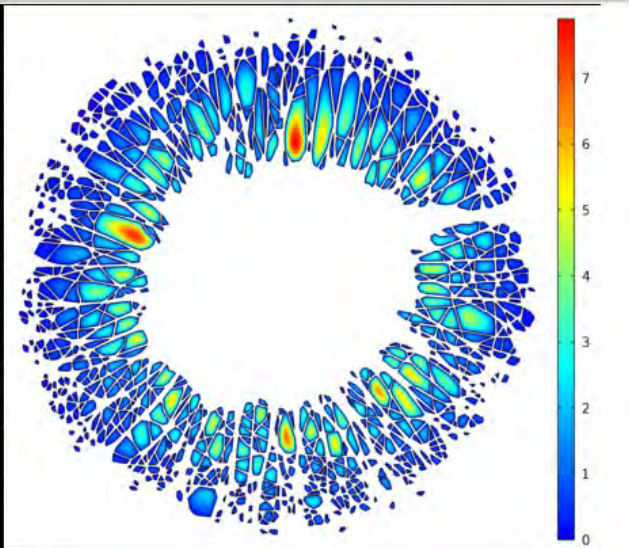

Expertise

- Plant water relations and transport processes
- Computational fluid dynamics
- Anatomy of transport tissues in plants

Fluid dynamics of flow between cells

Computer models and mathematical approaches to studying transport processes can help us understand the roles that these structures play in the flow of water from roots to the leaves of tall trees.

These images show work based on a computational fluid dynamics approach to flow through pits in conifer tracheids.

Biomechanics of valves in plant cells

Water flows along the xylem in conifer trees from cell-to-cell through small openings called pits. The pits in many species contain structures that appear to act as valves that prevent air from spreading and blocking the transport system. The above figures show results from solid mechanics modeling of the pressures that are required to deflect the valve and seal the pit.

Paleoecology

- **Dr. Carrie L. Tyler, Ph.D.**
- Assistant Professor
- Department of Geoscience
- Email: carrie.tyler@unlv.edu
- Website: www.carrietyler.com

Expertise

- Marine invertebrates
- Taphonomy
- Food webs
- Conservation Paleobiology
- Predation

Marine food web structure from the Bathonian Stage (168 mya) resembles a modern Jamaican reef, but not the ecosystem before or after it.

A better understanding of trophic position is needed for restoration planning, as communities may be so severely altered that restoring species or interactions may no longer be possible.

Banker *et al.* 2022 <https://doi.org/10.3389/fevo.2022.983374>

Fossil food webs before and after an invasion show changes in ecosystem dynamics, and invaders destabilized the ecosystem.

Conservation efforts may need to focus on preserving functional diversity if more diverse ecosystems are not inherently more stable.

Kempf *et al.* 2020

<https://doi.org/10.1017/pab.2020.26>
